MM2114/MM2114L Family 4096-Bit (1024 × 4) Static RAMs

Maximum Access/Current	MM2114- 15L	MM2114- 2L	MM2114- 25L	MM2114- 3L	MM2114- L	MM2114- 15	MM2114- 2	MM2114- 25	MM2114- 3	MM2114
Access (TAVQV-ns)	150	200	250	300	450	150	200	250	300	450
Active Current (I _{CC} -mA)	70	70	70	70	70	100	100	100	100	100

General Description

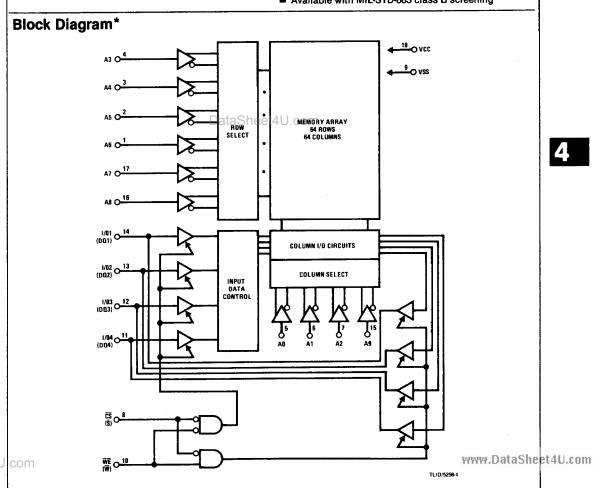

The MM2114 family of 1024-word by 4-bit static random access memories is fabricated using N-channel silicongate technology. All internal circuits are fully static and therefore require no clocks or refreshing for operation. The data is read out nondestructively and has the same polarity as the input data. Common input/output pins are provided.

The separate chip select input (CS) allows easy memory expansion by OR-tying individual devices to a data bus.

Features

- All inputs and outputs directly TTL compatible
- Static operation—no clocks or refreshing required
- Low power—225 mW typical
- High speed—down to 150 ns access time
- TRI-STATE® output for bus interface
- Common Data In and Data Out pins
- Single 5V supply
- Standard 18-pin dual-in-line package
- Available with MIŁ-STD-883 class B screening

Read Cycle Waveforms*

et4U.com

Read Cycle 1 (Continuous Selection $\overline{CS} = V_{IL}$, $\overline{WE} = V_{IH}$)

Read Cycle 2 (Chip Select Switched, $\overline{WE} = V_{IH}$)

Note 3: ,A write occurs during the coincidence low of $\overline{\text{CS}}$ and $\overline{\text{WE}}.$

Note 4: The output remains TRI-STATE if the \overline{CS} and \overline{WE} go high simultaneously. \overline{WE} or \overline{CS} or both must be high during the address transitions.

Note 5: Measured ± 50 mV from steady state voltage. This parameter is sampled and not 100% tested.

DC Electrical Characteristics $T_A = 0$ °C to +70°C, $V_{CC} = 5V \pm 5$ %
